“JIMCO’s MAC500s
have kept the cooling
coils completely clean.”

**WE INSTALLED IT 16 WEEKS AGO,
AND I HAVE NOT SEEN ANY TYPES OF MOLDS SINCE.**

LARS BO HANSEN, BUTCHER,

We have struggled with recurrent mold in our cold rooms for as long as I remember, and I have been here for more than 25 years. 2-4 weeks after chemical cleaning, we could start over.

We installed JIMCO’s MAC500s to eliminate airborne fungal spores and prevent mold growth on ceilings, lamps, walls, shelves, cardboard boxes, and in the cooling coils.

We installed it 16 weeks ago, and I have not seen any types of molds since. Additionally, our cooling coils have remained completely clean.

Lars Bo Hansen, Butcher, SuperBrugsen Søndersø

SuperBrugsen is part of Coop; the largest supermarket chain in Denmark with more than 1.000 stores in the country.

MOLD

A well-known unwelcome companion in many cold rooms. The dark, stuffy, damp rooms create the perfect conditions for mold growth, and once the fungal spores are inside, it takes time, elbow grease, and chemical solutions to remove them. Before they return after a short time, and you can start over.

TIRED OF STRUGGLING WITH MOLD?

LET JIMCO'S MAC500S DO THE JOB.

The environmentally friendly technology breaks down fungal spores, prevents mold growth, and reduces bacteria in your cold room.

- A positive side effect of MAC500s in your cold room is that meat you store overnight keeps its red color.

JIMCO®

UV-C & OZONE Technology

FOR MORE THAN 30 YEARS, JIMCO HAS BEEN THE COMPANY BEHIND SOME OF THE WORLD'S MOST UNIQUE AIR PURIFICATION AND STERILIZATION SOLUTIONS.

Since the design of our first air purification unit in 1992, we have not looked back, and today we deliver solutions to numerous industries and institutions such as McDonald's, Scandic Hotels, and Danish Crown.

MAC500s is a well-documented, thoroughly tested air purification solution that has been used to prevent mold successfully for more than 20 years.
